ZOOLOGY

(Honours Core)

Paper : ZOO-HC-5016

(Molecular Biology)

Full Marks : 60

281 mg Time: Three hours 9 150

The figures in the margin indicate full marks for the questions.

- 1. Choose the correct answer: 1×7=7
 - (i) The number of base pairs present in each turn of B-form of DNA helix is

(b) Photostage

(c) Phenoxidase

- (a) 9
- (b) 12
- (c) 11
- (d) 10

- (ii) In eukaryotes, the TATA box sequences required for initiation of transcription are present in
 - (a) 10 nucleotides upstream of transcription start site (TSS)
 - (b) 25 nucleotides upstream TSS
 - (c) 10 nucleotides downstream TSS
 - (d) 25 nucleotides downstream TSS
- (iii) The enzyme responsible for photoreactivation of DNA is

allowed the state of the manufaction with the

- (a) Photoligase
- (b) Photoreductase
- (c) Photooxidase
- (d) Photolyase

- (iv) The nucleotide cap that is attached at 5 the 5' end of mRNA during capping is 5-methyl guanosine (a) (b) 7-methyl guanosine (c) 5-acetyl guanosine (d) 7-acetyl guanosine Which of the following reaction is (v)required for proofreading during DNA replication by DNA polymerase III?
 - 5' to 3' exonuclease activity (a)
 - (b) 3' to 5' endonuclease activity
 - (c) 3' to 5' exonuclease activity
 - (d) 5' to 3' endonuclease activity
 - (vi) Removal of intron is called as
 - (a) Splicing a serial was reverse &
- るにも名言 (b) Capping
- to sheet (c) RNA editing as and air (a)
 - (d) All of the above

ANAT

| (vii) | Which of the following amino acids has the highest number of codons? | | | |
|--|--|---------------------|------|-------|
| | | Proline | | |
| | (b) | Leucine | 1 -3 | |
| | (c) | Tryptophan | | ē |
| nens: | | Aspartic acid | • | |
| Write short notes on the following: $2\times4=8$ | | | | |
| *. * | | sandar alve for 5 | : | Z^4-0 |
| (a) | Pyrimidine dimerization | | | |
| (b) | Split genes | | | |
| | 'Clover Leaf Model' of t-RNA | | | |
| (d) | Gene | e silencing to have | . 1 | 1: :7 |
| Answer any three from the following: | | | | |

(a) Write the steps involved in synthesis of rRNA.

5×3=15

JE,

3.

- (b) Write a note on the structural features of a prokaryotic ribosome.
- (c) Write a brief account on the mechanism of mRNA splicing in eukaryotes.

Discussed that he can inicial actual D

elengation and termination. 2:8-10

the in partenge of transcription factors

- (d) What is RNA editing? Write the role of editosome and guide RNA (gRNA) in insertion/deletion type of RNA editing.

 1+4=5
- (e) Write the difference between short interfering RNA (siRNA) and micro RNA (miRNA).
- 4. (a) Why is DNA replication known as 'high-fidelity' reaction? Briefly explain the mechanism of DNA replication in eukaryotes.

01=8+2 11 Esonomonia col. 2+1+7=10

- (b) What are protein synthesis inhibitors?

 Discuss the role of inhibitors in the regulation of various stages of protein synthesis.

 2+8=10
- 5. (a) What do you mean by degeneracy of the genetic code? Briefly explain the mechanism of translation of mRNA in prokaryotes with an elaborate discussion on translation initiation, elongation and termination. 2+8=10

(a) Write the digo nee boween stront

- (b) Briefly discuss the process of transcription in prokaryotes. Mention the importance of transcription factors in transcription process. 8+2=10
- 6. (a) What are inducers and co-repressors?

 What is an operon constituted of?

 Briefly explain the lactose (lac) operon
 in Escherichia coli. 2+1+7=10

as this filth and the Barry

(b) Describe the characteristic features of two classes of aminoacyl-tRNA synthetases. Explain the process of interaction between the two classes of aminoacyl-tRNA synthetases and their corresponding tRNAs.

4+6=10
